

The natural aging process, excessive smoking, long-term sunlight exposure and daily stress lead to the appearance of wrinkles, scars, pigmentation and blemishes.

The **innovative Venezia Lift CO₂ laser treatment** helps facial skin look younger and healthier, **without resorting to any surgery** or invasive intervention.

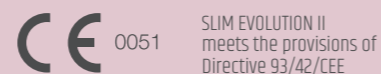

How does Venezia Lift work?

Venezia Lift with patented **CW-CHOPPED technology emission** ensures a controlled energy distribution in tissue with uniform thermal diffusion offering **non ablative fractional treatment** that rejuvenates the tissues stimulating new collagen production.
